🤖 Agentic RAG System

This system uses multiple AI agents to collaboratively improve information retrieval:

- **Query Understanding:** Analyzes intent and complexity
- **Query Routing:** Decides optimal retrieval strategy
- **Query Rewriting:** Optimizes queries for search
- **Retrieval:** Fetches relevant documents
- **Validation:** Filters low-quality context
- **Reflection:** Self-corrects weak answers

🤖 Agentic RAG Answer

Security Requirements for Confidential Data

Based on the provided documents, the security requirements for confidential data are as follows:

- **Data Classification:** Company data is classified into three levels: Public (no restrictions), Internal (share only within company), and Confidential (restricted to need-to-know basis). Customer data is always

📄 Traditional RAG Answer

Based on the provided context, the security requirements for Confidential data are:

1. Restricted to a need-to-know basis.
2. Breaches of Confidential data must be reported immediately to the Chief Information Officer.

Additionally, it is implied that Confidential data should be handled with extra care and security measures, such as:

classified as Confidential.

[Source 1, 2, 3, 4, 5]

- **Access Control:** Confidential data is restricted to a need-to-know basis. [Source 1, 2, 3, 4, 5]
- **Reporting Breaches:** Breaches of Confidential data must be reported immediately to the Chief Information Officer. [Source 1, 2, 3, 4, 5]
- **General Security Measures:** Transmission of data, locking workstations when unattended, and following the principle of least privilege when requesting system access are general security measures that apply to all data, including Confidential data. [Source 1, 2, 3, 4, 5]

Note that the provided documents are identical, suggesting that there may be an error in the document retrieval process. However, based on the information provided, the security requirements for Confidential data are clear.

1. Locking workstations when unattended (transmission, point 5).
2. Following the principle of least privilege when requesting system access (transmission, point 6).

It is also mentioned that Customer data is always classified as Confidential, indicating that customer data is subject to the same security requirements as Confidential data.
